

# Frank Sojonky Oct. 4, 1928 Oct. 15, 2012

The **development of biomarkers** to predict the outcome of prostate cancer is our **greatest unmet clinical need**.

# Prostate cancer is the most diagnosed cancer and the second leading cause of cancer-related death in men

27,900 new

diagnoses

Prostate Cancer accounted for 20% of cancers in men in 2024.

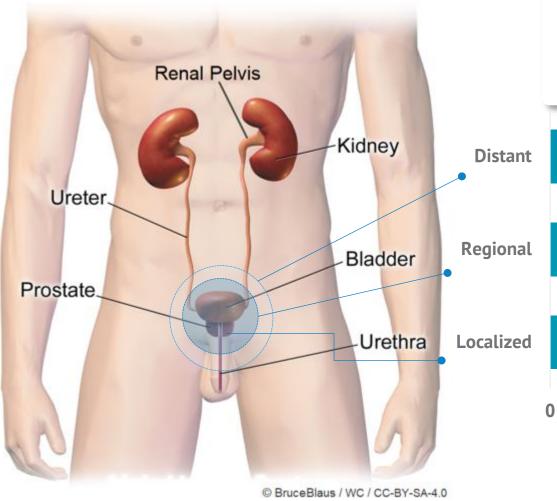

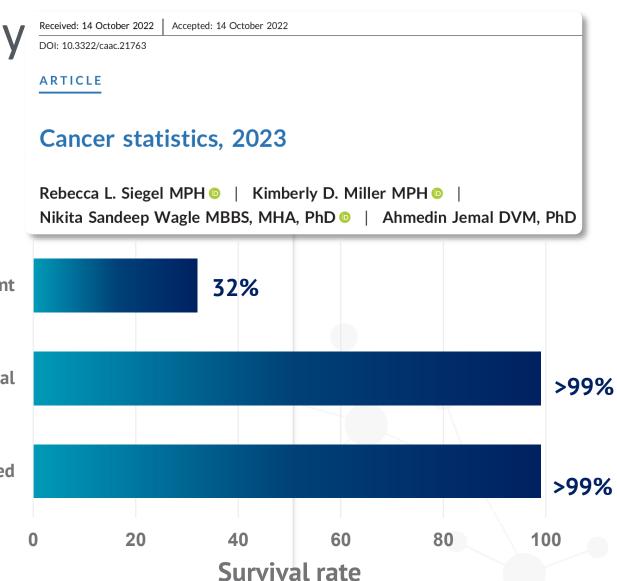

Prostate Cancer accounted for 10% of cancer-related deaths in men in 2024.

5000 deaths

# Detecting and treating PCa early improves outcomes by 3X

\*Race does not alter survival rates.

# Increased screening for PCa reduced related mortality rates in Canada

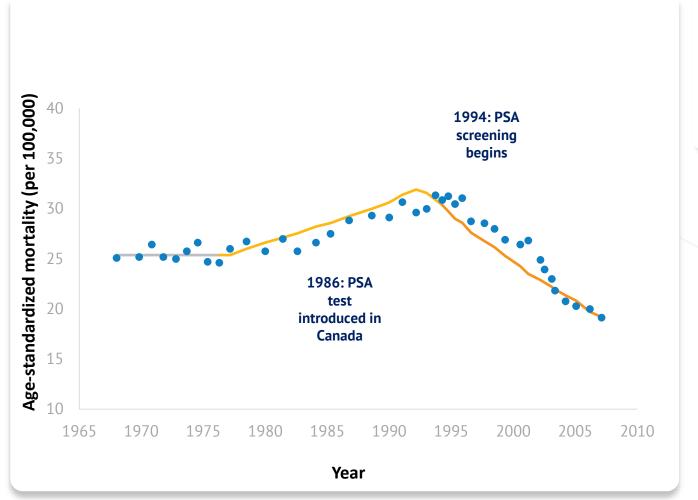

Research

Trends in prostate cancer incidence and mortality in Canada during the era of prostate-specific antigen screening

James Dickinson MBBS PhD, Amanda Shane MSc, Marcello Tonelli MD SM, Sarah Connor Gorber PhD, Michel Joffres MD PhD, Harminder Singh MD MPH, Neil Bell MD SM

Age-standardized mortality (per 100,000) & annual percent change (APC) of prostate cancer mortality, 1969-2009, Canada. Dickinson et al. (2016)

# PSA performs as well or better than nearly all widely used cancer screening tests

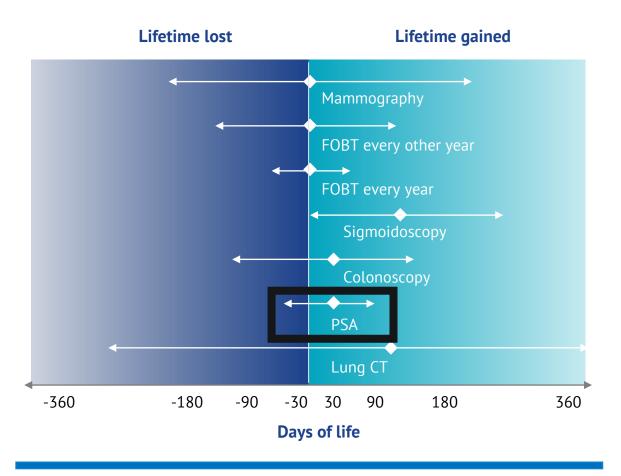

Figure 2: Lifetime Gained With Commonly Used Cancer Screening Tests

JAMA Internal Medicine | Original Investigation

Estimated Lifetime Gained With Cancer Screening Tests
A Meta-Analysis of Randomized Clinical Trials

Michael Bretthauer, MD, PhD; Paulina Wieszczy, MSc, PhD; Magnus Løberg, MD, PhD; Michael F. Kaminski, MD, PhD; Tarjei Fiskergård Werner, MSc; Lise M. Helsingen, MD, PhD; Yuichi Mori, MD, PhD; Øyvind Holme, MD, PhD; Hans-Olov Adami, MD, PhD; Mette Kalager, MD, PhD

01

Absolute survival benefits are absent for most cancer screening tests

PSA performs as well or better than nearly all widely used cancer screening tests

If prostate cancer screening with PSA testing reduces prostate cancer-related mortality, why has it not been more strongly recommended?

# Elevated PSA levels were associated with an increase in expensive, risky and invasive procedures

### **Next steps in Diagnosis**

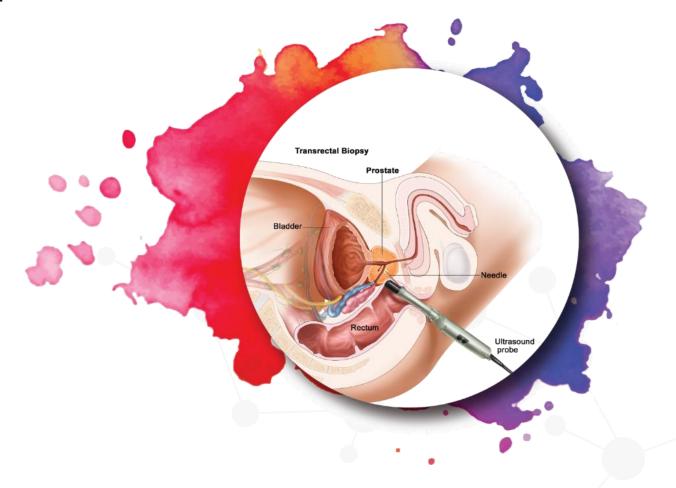

#### MRI

- Variable access
- Competing demands

#### **Biopsy**

- Transrectal or transperitoneal approach
  - Invasive
  - Uncomfortable
  - Associated risks of bleeding, infection, urinary retention, etc.

Results often show absent or indolent prostate cancer

# Concerns regarding PSA screening

Lack of specificity of PSA - high burden of investigation

Overdiagnosis of clinically indolent disease - overtreatment

## US Preventive Services Task Force review process

- 4. What is the accuracy of a pre-biopsy prostate cancer risk calculator or MRI in combination with a positive PSA-based screening test for identification of men with clinically significant prostate cancer?
- 4a. What is the effect of using a *pre-biopsy prostate cancer risk calculator* or MRI on prostate cancer biopsy rates compared to PSA-based screening alone?
- 4b. What is the effect of using a prebiopsy prostate cancer risk calculator or MRI on prostate cancer morbidity and mortality, quality of life, and function compared to PSA-based screening alone?

https://www.uspreventiveservicestaskforce.org/uspstf/document/draft-research-plan/prostate-cancer-screening-adults

- PSA screening should not be avoided.
- The use of adjunctive tests provides the benefits of screening while avoiding the harms of unnecessary transrectal prostate biopsies.

"...we suggest starting PSA testing at age 50 in most men and at age 45 in men at an increased risk of prostate cancer"

"For men with PSA > 3 ng/ml, consider more frequent PSA testing intervals or adjunctive testing strategies"

#### **CUA GUIDELINE**

UPDATE — 2022 Canadian Urological Association recommendations on prostate cancer screening and early diagnosis

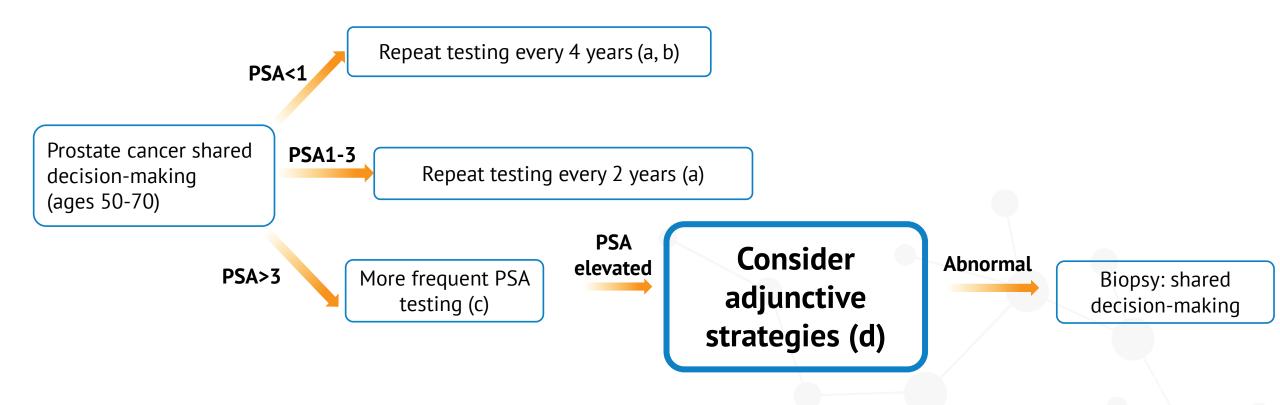

Endorsement of the 2021 Cancer Care Ontario guidelines on prostate multiparametric magnetic resonance imaging

Ross J. Mason¹; Karim Marzouk²; Antonio Finelli³; Fred Saad⁴; Alan I. So⁵; Philippe D. Violette <sup>6,7</sup>; Rodney H. Breau³; Ricardo A. Rendon¹;

<sup>1</sup>Department of Urology, Dalhousie University, Halifax, NS, Canada; <sup>2</sup>Windsor General Hospital, Windsor, ON; and Western University, London, ON, Canada; <sup>3</sup>Division of Urology, University of Toronto, ON, Canada; <sup>4</sup>Department of Surgery (Urology), University of Montreal, Montreal, QC, Canada; <sup>5</sup>Department of Urologic Sciences, University of British Columbia, Vancouver, BC, Canada; <sup>6</sup>Department of Surgery, Western University, London, ON, Canada; <sup>7</sup>Departments of Surgery and Health Research Methods, Evidence, and Impact, McMaster University, Hamilton, ON, Canada; <sup>8</sup>Division of Urology, University of Ottawa, Ottawa, ON, Canada

## Reducing prostate biopsies:

What if we could improve the accuracy of the PSA test to only biopsy those men who really need it?

Prostate cancer screening pathway. (a) Discontinue screening if life expectancy < 10 years; (b) consider discontinuation of screening if age > 60 and PSA < 1 ng/ml; (c) more frequent testing interval can be considered; the optimal frequency is unknown; (d) for example risk calculators, %free PSA, etc.

2022 Canadian Urological Association recommendations on prostate cancer screening and early diagnosis.

## What are the goals of the ideal prostate cancer screening approach?

Preserve the mortality benefits of prostate cancer screening and catch prostate cancer early when the treatment options are most effective.

#1

Reduce overdiagnosis and overtreatment by not exposing low risk cases to invasive diagnostic procedures while prioritizing high risk cases for Urological assessment without delay.

John D. Lewis @ 24 🖂

- 3-4x more accurate than PSA alone
- Validated using Real-World Evidence
- Can reduce costs to the healthcare system and individuals
- Can help prioritize and reduce wait times for MRI and biopsy

ClarityDX Prostate was developed and validated in a study that included 3,488 patients from across the world

Prostate Cancer Centre Calgary, AB, CANADA

Baltimore, ML, USA

Los Angeles, CA, USA

Thomayer University Hospital Prague, Czech Republic

## ClarityDX Prostate uses an optimized machine learning model to accurately predict clinically significant prostate cancer

Our Machine Learning Pipeline Significantly Improves Predictive Power

# Age Required Digital rectal exam

#### **Clinical Features**

- Previous negative biopsies
- **Optional** findings\*

**Advanced** 

- Prostate Volume (MRI)\*
- PIRADS\*

Machine Learning

#### **Biomarker Integration**

- Total PSA
- Free PSA

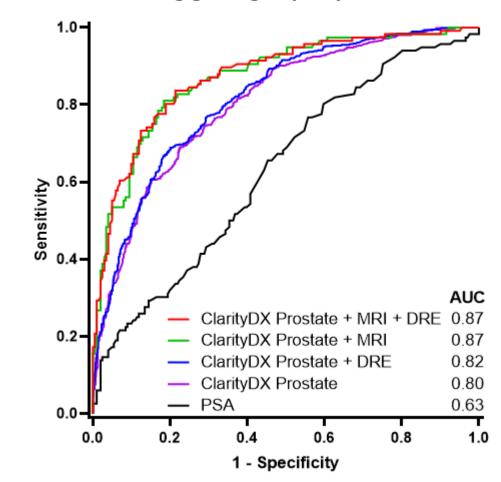

\*Optional

Risk score Probability of clinically significant (GG≥2) prostate cancer

# In a 3,448-patient clinical study, we found that ClarityDX Prostate is 3-4X more accurate than PSA alone

#### Predicting grade group ≥2 prostate cancer

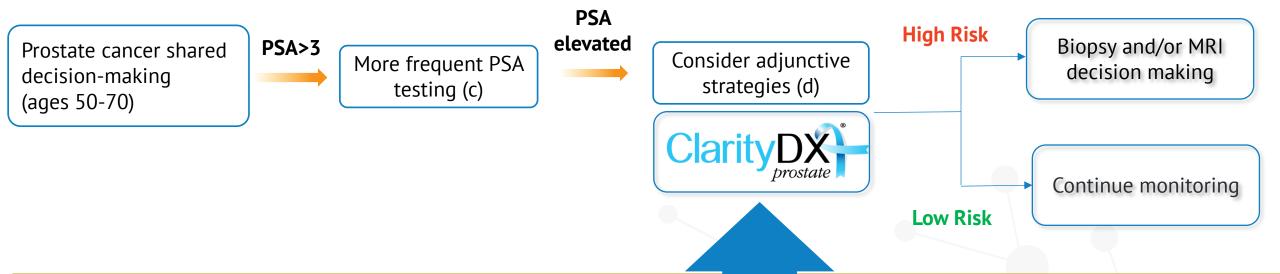

Algorithm	AUC	Sens	Spec	PPV	NPV
ClarityDX Prostate +DRE+MRI	0.87	95	47	51	94
ClarityDX Prostate + MRI	0.87	95	45	50	94
ClarityDX Prostate + DRE	0.82	95	35	54	94
ClarityDX Prostate	0.80	95	32	52	89
PSA	0.63	95	12	38	80

Using ClarityDX Prostate will reduce the number of unnecessary prostate biopsies by up to 47%

# Integrating ClarityDX Prostate into the care path:

ClarityDX Prostate fits perfectly within the CUA and NCCN guidelines as an adjunctive testing strategy to be performed with a PSA >3 and before decisions about an MRI and/or biopsy

2022 Canadian Urological Association recommendations on prostate cancer screening and early diagnosis.

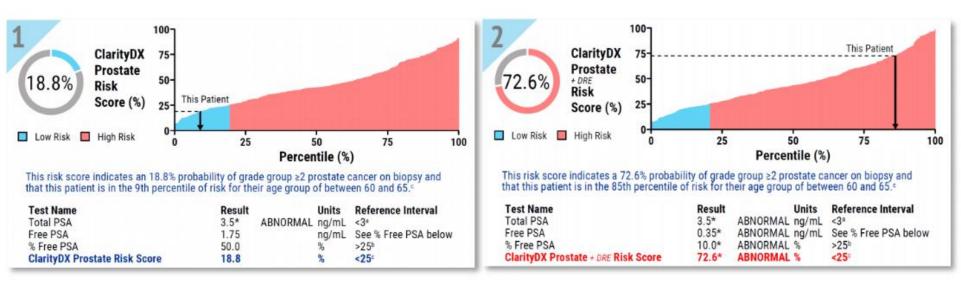

- Avoid **32% 47%** of biopsies
- Prioritization of high-risk cases

M. Eric Hyndman et al. (2023) Lock & Yan (2023)

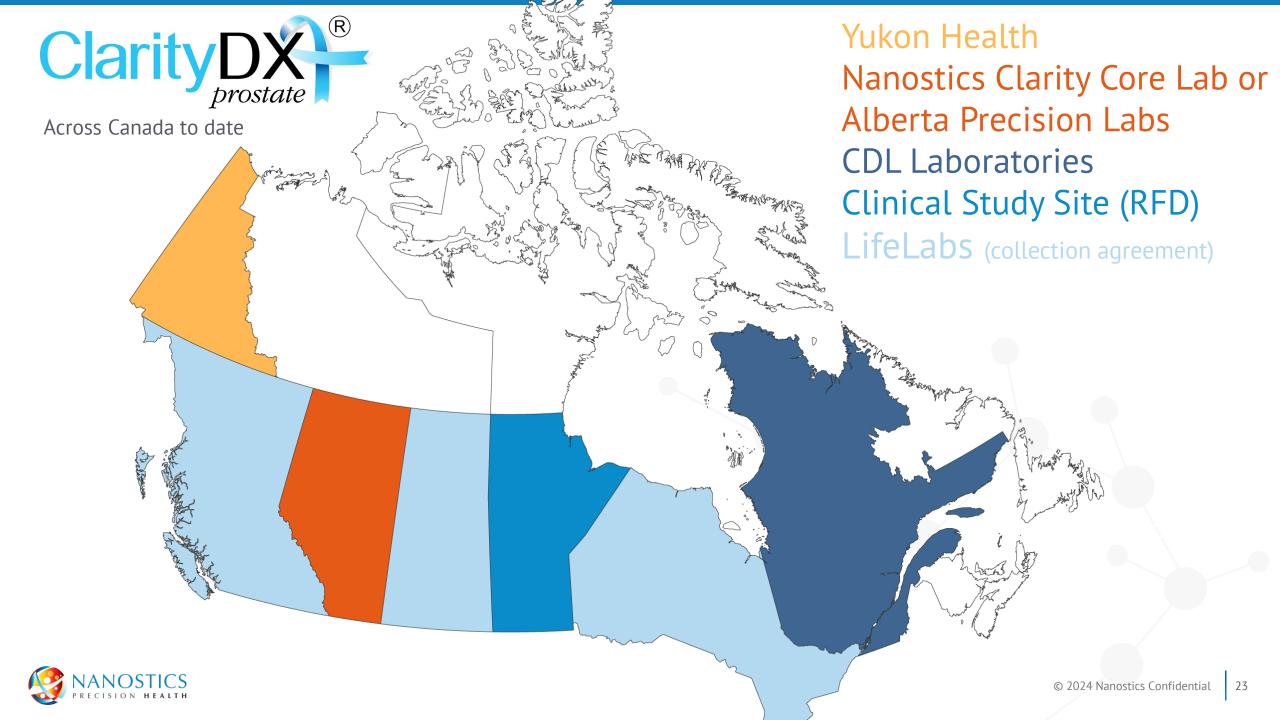

## Interpreting the results of the ClarityDX Prostate test

ClarityDX 75-ClarityDX 75-This Patient Prostate **Prostate** 51.4% 68.8% 50 + MRI + DRE Risk Risk Score (%) Score (%) 75 75 100 25 Percentile (%) Percentile (%) This risk score indicates a 68.8% probability of grade group ≥2 prostate cancer on biopsy and that this patient is in the 80th percentile of risk for their age group of between 60 and 65.° This risk score indicates a 51.4% probability of grade group ≥2 prostate cancer on biopsy and that this patient is in the 70th percentile of risk for their age group of between 60 and 65.0 **Test Name** Reference Interval **Test Name** Reference Interval Result Result Total PSA Total PSA ABNORMAL ng/mL <38 ABNORMAL ng/mL <38 See % Free PSA below Free PSA ABNORMAL ng/mL See % Free PSA below Free PSA ABNORMAL ng/mL % Free PSA ABNORMAL >250 ABNORMAL ClarityDX Prostate + MRI Risk Score <170 ClarityDX Prostate + MRI + DRE Risk Score <17°

- The ClarityDX Prostate Test Report provides the patient's total PSA, % free PSA, and the ClarityDX Prostate Risk Score calculated by the machine learning algorithm.
- The risk score is provided as a percent probability of GG 2 and above prostate cancer and is reported with the patient's risk associated with their age group.
- A risk score of 25% or below (within the blue section) indicates a low risk for clinically significant prostate cancer.

## Barriers to full adoption and integration of ClarityDX Prostate

- Awareness
  - By patients, providers, health systems
- Integration into guidelines
  - Overly complex in Canada. USA is much further ahead
- Cost coverage
  - Universal healthcare, benefits, seamlessness
